

# FXC (Fixed Length) Standard Custom Form

**FX** (Fixed Length) linear drains are designed for use with traditional waterproofing methods including PVC Liners, Rubber Liners, Hot Mop, Lead Pan, Copper Pan and Fiberglass. The overall length of the channel (**A**) is the finished length of the drain, which is the outside dimension. All outlet locations (**B**) are measured from the right outside edge. For this installation a mechanically fastening drain body (clamp down drain) must be installed. A mortar bed or equal is spread across the shower area and sloped in all directions towards the clamp down drain body. A waterproofing membrane is installed with the drain body and over the mortar bed. The linear drain is threaded into the drain body and set to the correct height. A final layer of mortar is spread to encase the linear drain and is spread across the shower floor with a slope to the drain. Tile or stone is applied to the final mortar bed.

Note: Lengths exceeding the grate's maximum single length will be split into equal sections.
